COP • Cloud Order Printing: *With Star Micronics*

PART 2837145

COP "Cloud Order Printing" Module allows a restaurant to setup custom printing workflows to complement the printing and Kitchen Display System of the POS. In partnership with Star Micronics Appsuite has developed a solution where one or more printers can be configured to print selected check, order, and customer information to specialized printers for things like order packaging, catering, and delivery partners. The highly reliable, low-maintenance printers are available as label or thermal roll. When configuring the COP module you can determine which items and information should print on each COP printer, much like you do in your POS. The solution enables preorders to output immediately on certain cloud printers for planning and logistics with ODS delivery sent appropriately to the kitchen with proper lead time for production.

Supported Star Micronics cloud printers are Appsuite Parts 3527041 and 3401688 and 2971583.
See Appsuite Hardware Product Datasheet: Cloud Order Printing for information about available printers, label/paper rolls and accessories.
